Subject: No genetic engineering!

Sensitivity: Personal

I am opposed to any and all food engineering or altering. I feel that all food should be labeled as such, so that I would never eat something that was altered by mistake. Don't you people get it? Americans are the sickest population in the world because of what they eat. We have enough problems outside of our bodies, that we don't need to put more inside. Spend your time and energies cleaning up our environment around the world. Why don't you alter that??? Oh, that's right-you wouldn't make any money then--Would you?

You're suppose to be making laws and policies to help people, not hurt them. This would hurt them-so don't allow genetic engineering.

Thank-you

Joan Helen Hubert
